

Career & Technical Education

Purpose-built environments for growing pathways

WHO WE ARE

School Outfitters is the only education-focused furniture and equipment partner built specifically for the people who show up for students every day.

We've been building trust with educators since 1998. We started with a simple belief: educators deserve better support. That still drives everything we do. We cover the heavy lifting so you can focus on what matters most.

We don't adapt commercial furniture for school use or repurpose office products for classrooms. Our exclusive brands, the experts on our team, and every part of the process — **from first conversation to final installation** — is built around making it easier to create better learning environments. It's why 97% of America's top 1,000 school districts trust us with their projects, time and time again.

From first conversation to final installation, we're with you every step of the way.

DESIGN

Visualize your space before you commit with expert product recommendations, free room designs, and product samples.

SELECTION

Find the right fit for your students and your budget across four exclusive brands and hundreds of trusted brand partners.

DELIVERY

We eat deadlines for breakfast. Thousands of quick-ship options and reliable lead times keep your project on schedule.

INSTALL & SUPPORT

We offer assembly and installation and even remove unwanted furniture and debris. All warranties are managed in-house to keep things simple.

HOW WE DO CTE

A CTE lab isn't a classroom with different furniture. It's a workspace. The chair that works in a lecture setting fails at a standing workbench. The table height calibrated for writing isn't the height needed for culinary prep or medical simulation. The storage unit designed for textbooks doesn't always work for tools, equipment, or clinical supplies. When the environment doesn't match the profession, students notice, and so do the instructors.

School Outfitters designs and sources furniture for CTE environments specifically — not furniture adapted for a lab context. That means pathway-appropriate configurations, industry-relevant specs, and a range deep enough to outfit both the lab and the classroom side of CTE programs without switching vendors.

You need furniture and equipment for both classrooms and labs, you shouldn't have to source them separately.

HEALTH SCIENCES Medical, Dental, Exercise Science

Health Sciences program environments need to function like clinical settings, not approximations of them.

School Outfitters Health Sciences products like medical simulation lab furniture and equipment, and clinical-grade storage and surfaces, are designed to create environments that mirror the real-world settings students are preparing to enter.

What Makes it Work

- Adjustable-height chairs, exam beds, and procedure tables.
- Cleanable, antimicrobial surfaces.
- Clinical storage compatible with medical supply organization.
- Flexible classroom seating that supports lecture, case study discussion, and small-group clinical review.

CULINARY & HOSPITALITY

Culinary Arts, Food Science, Hospitality Management

A Culinary lab is one of the most demanding environments in any CTE building, with high heat, high moisture, heavy equipment, and constant transitions between prep, demonstration, and service.

We design Culinary and Hospitality spaces based on how professional kitchens really operate. Commercial-grade stainless steel work surfaces, adjustable-height prep stations that accommodate a range of student needs, and flexible seating for both classroom instruction and dining components of Hospitality programs.

What Makes it Work

- Commercial-grade prep surfaces rated for daily professional use.
- Heavy-duty storage for equipment and supplies.
- Configurations that support both demonstration and independent station work.
- Flexible classroom seating that shifts between instruction and presentation setups.

DIGITAL ARTS & MEDIA PRODUCTION

Graphic Design, Video Production, Photography, Audio Engineering, Broadcast

Digital Arts and Media programs live at the intersection of studio and classroom. A Media Production student might move from a lecture on color theory to an editing suite to a broadcast set in the same class period.

School Outfitters mobile, reconfigurable furniture supports these transitions with ease, creating spaces that adapt to individual work and team-based production without feeling improvised.

What Makes it Work

- Workstations with integrated cable management and monitor support.
- Mobile configurations that reconfigure fast for different production modes.
- Acoustically appropriate surfaces for recording and production spaces.
- Flexible classroom seating for critique, presentation, and collaborative review.

BUSINESS & TECHNOLOGY

Entrepreneurship, Finance, Information Technology, Computer Science

An IT classroom has to support focused, individual work one moment and collaborative troubleshooting the next. An Entrepreneurship program might shift from pitch practice to market research to team planning—all within a single class period. These aren't static environments, and the furniture shouldn't be either.

Mobile tables, flexible seating, and adaptable layouts give these spaces the ability to shift as quickly as the work does to support both instruction and real-world application without compromise.

What Makes it Work

- Reconfigurable tables and seating that shift between individual and team modes.
- Workstation configurations with appropriate power and cable access.
- Display and presentation infrastructure that supports student-led work.
- Durable, flexible seating built for high-frequency reconfiguration.

Early Childhood Education programs have a unique challenge: they're teaching students how to teach. That means the space has to function as both a realistic early learning classroom and an effective instructional environment for older students.

We support both sides. Our exclusive Sprogs line is designed specifically for early learning, with child-scaled furniture that makes lab simulations feel authentic. Learniture and Norwood support the instructional side, giving educators the tools they need to teach, observe, and guide.

What Makes it Work

- Child-scaled Sprogs furniture for simulation lab environments.
- Safety-certified materials throughout the early childhood lab.
- Age-appropriate storage and activity configurations.
- Standard secondary seating and tables for the instructional component.

CONSTRUCTION & MANUFACTURING TRADES
Carpentry, Electrical, Plumbing, HVAC, Welding

Trades labs are the most physically demanding environments in any building. Heavy equipment, tool storage, standing work surfaces, and safety requirements that go beyond what standard educational furniture is rated for — this is the environment where the gap between ‘school furniture’ and ‘purpose-built for the work’ is most visible.

School Outfitters brings a solid Construction and Manufacturing Trades range focused on the elements that matter most: durable seating, work surfaces rated for actual use, and storage configurations appropriate for tools and safety equipment.

What Makes it Work

- Heavy-duty work surfaces with appropriate load ratings.
- Tool and equipment storage that matches safety protocols.
- Adjustable-height benches for standing and seated task work.
- Durable classroom seating built for high-activity program environments

COSMETOLOGY & PERSONAL CARE

Cosmetology, Esthetics, Nail Technology, Barbering

Cosmetology programs require both specialized salon equipment and furniture for the surrounding environments that make the space function like a real business.

School Outfitters supports the full program with styling stations and salon essentials, along with durable and comfortable furnishings for reception and waiting areas, demonstration classrooms, and retail displays that create a cohesive, real-world salon experience.

What Makes it Work

- Reception and waiting area configurations for student salon environments.
- Flexible classroom seating and tables for theory instruction and licensing prep.
- Retail display and storage appropriate for student salon retail components.
- Common area furniture that completes the professional environment.

CORE CLASSROOMS

Lectures, Demonstrations, Testing

Core classrooms are the backbone of many CTE programs. We furnish spaces that can seamlessly flex between foundational instruction and hands-on application.

What Makes it Work

- Mobile desks and tables.
- Adaptable seating.
- Flexible configurations.
- Durable materials that hold up to daily use.

WARRANTIES WITHOUT THE RUNAROUND.

Reliable exclusive brands with lifetime warranties. Clear terms, in-house claims handling for all purchases, and a support team that's easy to reach.

WHITE GLOVE & TURN-KEY OPTIONS.

A delivery that leaves your facilities team assembling furniture all day isn't a complete delivery. Installation services with old furniture haul-away mean you can have a space that's ready for students the moment we leave.

THE PROCESS

Finding the right product matters. So does everything that happens after. Contract compliance, project management, delivery, installation, and long-term support — we handle all of it.

SKIP THE PROCUREMENT HEADACHES.

More than 150 active contracts and cooperatives mean compliant purchasing is already in place, so you get better pricing and faster timelines, without extra work.

School Outfitters | The Process

WE'RE READY WHEN YOU ARE.

A nationwide factory and warehouse network designed around expecting the unexpected — with quick-ship options in-stock for when timelines shift or replacements can't wait.

NO DROPPED BALLS, NO CHASING UPDATES.

With a dedicated project management team that keeps orders, timelines, vendors, and logistics coordinated — you don't have to be the one holding it all together.

THE CASE STUDY

Butler Tech Natural Science Center

LOCATION	PROJECT TYPE	SIZE
Monroe, Ohio	New Construction	25,000 sq ft. center Built to accomodate 250 students

School Outfitters partnered with Butler Tech to furnish its new 25,000-square-foot Natural Science Center – designed for hands-on programs like veterinary science, equestrian studies, and green engineering. The school needed durable, highly flexible furniture and equipment that could hold up to heavy use while supporting rapid re-configuration. The final design aligned with the center’s rustic aesthetic and adaptable learning goals.

“The new and dynamic furnishings have “absolutely” impacted how the students use the space today. In fact, the students leverage the center’s flexibility on a daily basis.”

David Plotts | Executive Director of Business Operations, Butler Tech

HOW WE HELPED
GET THINGS DONE

PROJECT MANAGEMENT

Careful project management from start to finish meant the end result wasn't left to chance, and Butler Tech got the flexible, durable space they needed.

FREE ROOM DESIGNS

Our in-house design team supplied 3D room layouts so Butler Tech could see their space come to life before anything was purchased or installed.

PRODUCT CUSTOMIZATION

Customization goes further than you might think. For Butler Tech, it meant furniture color-matched to fit their brand from the start.

ASSEMBLY & INSTALL

Despite construction delays, we kept the furniture order on schedule – delivered, set up, and ready to go on the first day of class.
